

# Manager Training Guide

Detailed manager guidebook with examples, screen-style pictures, what to input, what to avoid, and final checks before saving or submitting.

**SHIFT 1**

**4:00 AM - 1:00  
PM**

**SHIFT 2**

**1:00 PM - 10:00  
PM**

**SHIFT 3**

**10:00 PM - 4:00  
AM**

**WEBSITE**

**fueltechphil.vercel.app**

**Training rule:** Do not guess. If branch, date, shift, pump number, product, price, or deposit coverage looks wrong, stop and ask before pressing confirm.

## 1. Manager Job Summary

**YOUR JOB****Prices and deposits**

Enter fuel prices, price changes, and daily bank deposits for your own station.

**YOUR LINK****/manager**

Use manager login only. Do not use cashier login.

**ADMIN APPROVAL****Required for changes**

Wrong deposits require Request Change or Request Removal.

**1. Login**

Pick only your station branch.

**2. Prices**

Enter Premium, Regular, Diesel selling prices.

**3. Price Changes**

Use only when price changed mid-shift.

**4. Deposits**

Save bank deposit with correct sales date and shifts.

**5. Review**

Use history; request change/removal if wrong.

**Gray box**

Status or saved information.

**White/blue input**

Type the number or detail.

**Green button**

Save after checking.

**Yellow/red warning**

Stop and verify first.

**Manager boundary:** Manager handles prices and bank deposits for their station. Manager does not submit cashier reports, approve bank verification, or use cashier/admin access.

## 2. Login And First Check

**1****Open manager page**

Open <https://fueltechphil.vercel.app/manager>, choose your branch, enter manager PIN, and press **Proceed**.

2

## Confirm branch

Manager should only enter data for their own station. If branch is wrong, stop before saving anything.

**If branch is wrong:** stop. Do not enter prices or deposits under another station. Go back and choose the correct branch first.

## 3. Fuel Price Setup

Fuel prices must be entered before cashier submits reports with sold liters. The cashier report uses these prices to calculate fuel sales.

**Fuel Price Setup**Manager

|                                       |                                           |                                      |                                         |
|---------------------------------------|-------------------------------------------|--------------------------------------|-----------------------------------------|
| <b>BRANCH</b><br>Liloan               | <b>PRICE EFFECTIVE DATE</b><br>2026-07-09 | <b>PRICING COVERAGE</b><br>Daily     | <b>PRICING BASIS</b><br>Carries forward |
| <b>PREMIUM MANAGER PRICE</b><br>72.50 | <b>REGULAR MANAGER PRICE</b><br>71.50     | <b>DIESEL MANAGER PRICE</b><br>67.80 |                                         |

**Confirm Fuel Prices**

| FIELD                   | WHAT TO INPUT                                      | WHEN TO USE                               |
|-------------------------|----------------------------------------------------|-------------------------------------------|
| Price Effective Date    | Date the price starts                              | Use the sales date, not the deposit date  |
| Pricing Coverage: Daily | Price applies to the whole day and carries forward | Normal case                               |
| Pricing Coverage: Shift | Price applies to one shift only                    | Only when one shift has different pricing |
| Manager Price           | Selling price per liter                            | Premium, Regular, Diesel                  |

### Daily pricing

Use this for normal days. The price applies to the whole day and continues until a new price is saved.

### Shift pricing

Use this only when one shift has a different price. Choose the exact shift before confirming.

**Important:** Do not leave prices blank when there are fuel sales. Cashier may be blocked or sales may be wrong.

**If cashier sees "pump price missing":** enter the correct fuel price for that sales date/shift, press **Confirm Fuel Prices**, then ask cashier to refresh and submit again.

## 4. Price Change During Shift

Use this only when the price changes in the middle of an active shift. This section teaches the "before and after price/register" rule.

**Price Change During Shift**

Only if price changed mid-shift

**PRODUCT**  
Regular

**EFFECTIVE TIME**  
1:30 PM

**NEW MANAGER PRICE**  
72.00

| PUMP           | OPENING REGISTER | PRICE-CHANGE REGISTER | CURRENT CLOSING | MEANING                                                   |
|----------------|------------------|-----------------------|-----------------|-----------------------------------------------------------|
| Pump 1 Regular | 325929.76        | 325950.00             | 326030.05       | Before 325950 uses old price; after 325950 uses new price |
| Pump 2 Regular | 209393.00        | 209410.00             | 209455.00       | Must be between opening and closing                       |

### Correct

- Old price: before effective time.
- New price: after effective time.
- Price-change register is the pump reading at the exact change time.
- Enter every matching nozzle for that product.

### Wrong

- Do not overwrite whole-day price if change happened mid-shift.
- Do not leave one nozzle blank.
- Do not type a price-change reading lower than opening or higher than closing.

**Simple example:** Regular price changed from 71.50 to 72.00 at 1:30 PM. The pump register at 1:30 PM was 325950.00. Sales before 325950.00 use 71.50. Sales after 325950.00 use 72.00.

**Ask cashier for the exact pump register at the price-change time.** Do not use the final closing reading as the price-change reading.

## 5. Manager Summary

This section is for quick status only. It shows report status, bank deposits, pending verification, and deposit rows for the selected station/report.

| CARD                 | MEANING                                 | MANAGER ACTION                                                |
|----------------------|-----------------------------------------|---------------------------------------------------------------|
| Report Status        | Draft or Submitted                      | Cashier submits reports; manager should not use cashier login |
| Bank Deposits        | Deposits entered for selected report    | Check if deposit was saved under correct coverage             |
| Pending Verification | Admin has not verified yet              | Wait for admin                                                |
| Deposit Rows         | Number of deposit rows in history/range | Use history to find mistakes                                  |

## 6. Daily Bank Deposit

Deposit entries explain where the station cash went. The most common mistake is putting the correct amount under the wrong sales date or wrong covered shift.

Daily Bank Deposit

Manager

DEPOSIT DATE  
2026-07-10

SALES DATE COVERED  
2026-07-09

COVERS  
Shift 2 + Shift 3

WILL COUNT UNDER  
Shift 2, Shift 3

BANK

AMOUNT  
100000

Save Daily Bank Deposit

| DEPOSIT SITUATION                                    | DEPOSIT DATE | SALES DATE COVERED | COVERS            | WHY                                              |
|------------------------------------------------------|--------------|--------------------|-------------------|--------------------------------------------------|
| Deposit made today for yesterday Shift 2 and Shift 3 | Today        | Yesterday          | Shift 2 + Shift 3 | One deposit covers two shifts                    |
| Deposit made today for all shifts of one sales date  | Today        | Sales date         | All Shifts        | One combined deposit, not three separate entries |
| Deposit made today for today Shift 1 only            | Today        | Today              | Shift 1           | Only one shift covered                           |

**Combined deposit rule:** If one bank deposit covers many shifts on the same sales date, enter it once with the correct coverage. Do not enter the same amount three times.

**If one real bank transaction covers two sales dates:** split it by sales date so reports count correctly. Example: one entry for yesterday Shift 2 + Shift 3, and one entry for today Shift 1. Use the same bank/reference if needed, but do not combine two sales dates into one row.

## 7. Liloan Reference Field

For Liloan, the reference label may show as **Minutes and Seconds**. Enter the bank/reference detail required for that station. For other branches, use the normal bank reference number.

## 8. Deposit History

Use Deposit From and Deposit To to check saved deposits for your station. Default range is the last 7 days.

## Deposit History

Manager can see own station only

| SALES DATE | COUNTED SHIFT     | DEPOSIT DATE | BANK | AMOUNT | STATUS   | ACTION                   |
|------------|-------------------|--------------|------|--------|----------|--------------------------|
| 2026-07-09 | Shift 2 + Shift 3 | 2026-07-10   | BDO  | 100000 | Pending  | Request Change / Removal |
| 2026-07-08 | Shift 1           | 2026-07-08   | BPI  | 58000  | Verified | Request Change / Removal |

### PENDING

#### Saved, not verified

Admin has not confirmed the bank yet.

### VERIFIED

#### Admin confirmed

Bank deposit is accepted.

### CHANGE REQUESTED

#### Waiting admin

Detail is wrong, but not changed yet.

### REMOVAL REQUESTED

#### Waiting admin

Wrong/duplicate row needs removal.

## 9. Request Change Or Removal

### Request Change

Use when the deposit is real but some detail is wrong: amount, bank, reference, date, or coverage.

### Request Removal

Use when the deposit should not exist: duplicate entry, wrong station, or completely wrong sales date.

**Do not secretly fix deposit history.** Press Request Change or Request Removal and wait for admin approval.

## 10. Troubleshooting

| PROBLEM                                    | MEANING                                                        | MANAGER ACTION                                                                      |
|--------------------------------------------|----------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Cashier says pump price missing            | Sold liters exist but no price was saved                       | Enter correct fuel price and confirm                                                |
| Cashier cannot submit                      | Missing price, missing previous shift, or wrong required field | Check prices first; if price is okay, ask admin to inspect missing shift/correction |
| Wrong branch selected                      | Data may save under another station                            | Stop and choose correct branch before saving anything                               |
| Sales look wrong after price change        | Mid-shift price-change reading may be wrong                    | Check effective time, new price, and every product nozzle reading                   |
| One bank transaction covers multiple dates | One row cannot correctly describe two sales dates              | Split entries by sales date, using the correct covered shifts                       |
| Deposit appears under wrong shift          | Coverage or sales date was wrong                               | Request Change                                                                      |
| Deposit entered twice                      | Duplicate deposit                                              | Request Removal for wrong duplicate                                                 |
| Reference wrong                            | Deposit may be hard to verify                                  | Request Change with correct reference/minutes-seconds                               |
| Pending verification                       | Admin has not approved bank deposit yet                        | Wait or ask admin to verify                                                         |

## 11. Final Manager Checklist

- Correct branch selected
- Correct price effective date
- Daily vs Shift coverage correct
- Premium price entered
- Regular price entered
- Diesel price entered
- Confirm Fuel Prices pressed
- Mid-shift price change used only if needed
- Price-change time correct
- Price-change register readings complete
- Deposit Date correct
- Sales Date Covered correct
- Covers/shift coverage correct
- Split deposit by sales date when needed
- Bank/reference entered
- Amount entered once
- Request Change/Removal used for mistakes
- Deposit history checked when unsure

## Sticker Reminders - Manager

### Fuel Prices

- Set effective date.
- Daily unless one shift only.
- Enter P/R/D.
- Press Confirm Fuel Prices.

### Mid-Shift Price

- Only if price changed during shift.
- Enter exact time.
- Enter pump reading at change time.

### Deposit

- Deposit Date = bank day.
- Sales Date = sales day.
- Covers = shift/s included.

### Wrong Deposit

- Request Change for wrong detail.
- Request Removal for duplicate/wrong deposit.
- Wait for admin.
